GROHE Limited  
Components User Guide

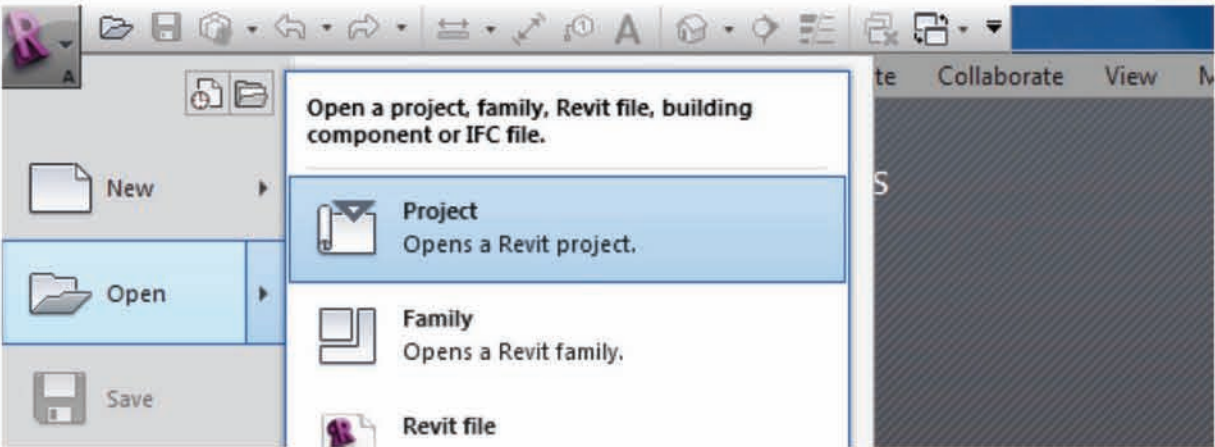

Version 1.0 | Revit 2013  
Jan 2014

# Loading the GROHE components into your project

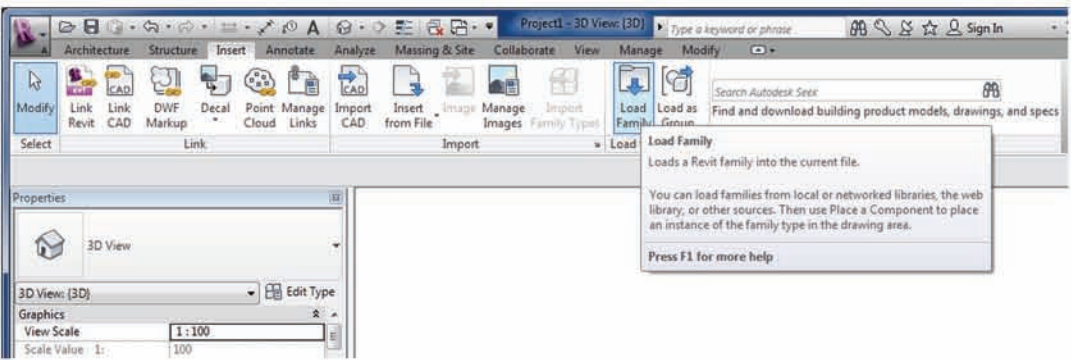

These components have been created as facebased plumbing fixtures with standard configurations pre-defined as 'types'. You can add the family into your project using the following method.

1. Open the Revit file containing your 'project', and navigate to a an appropriate view.

2. Now save the component that you downloaded from bimstore to your desired location on your computer (In line with your company protocols).

3. To load the component into the project, go to 'Insert Tab/Load Family/Select the component from your saved location' as shown below:

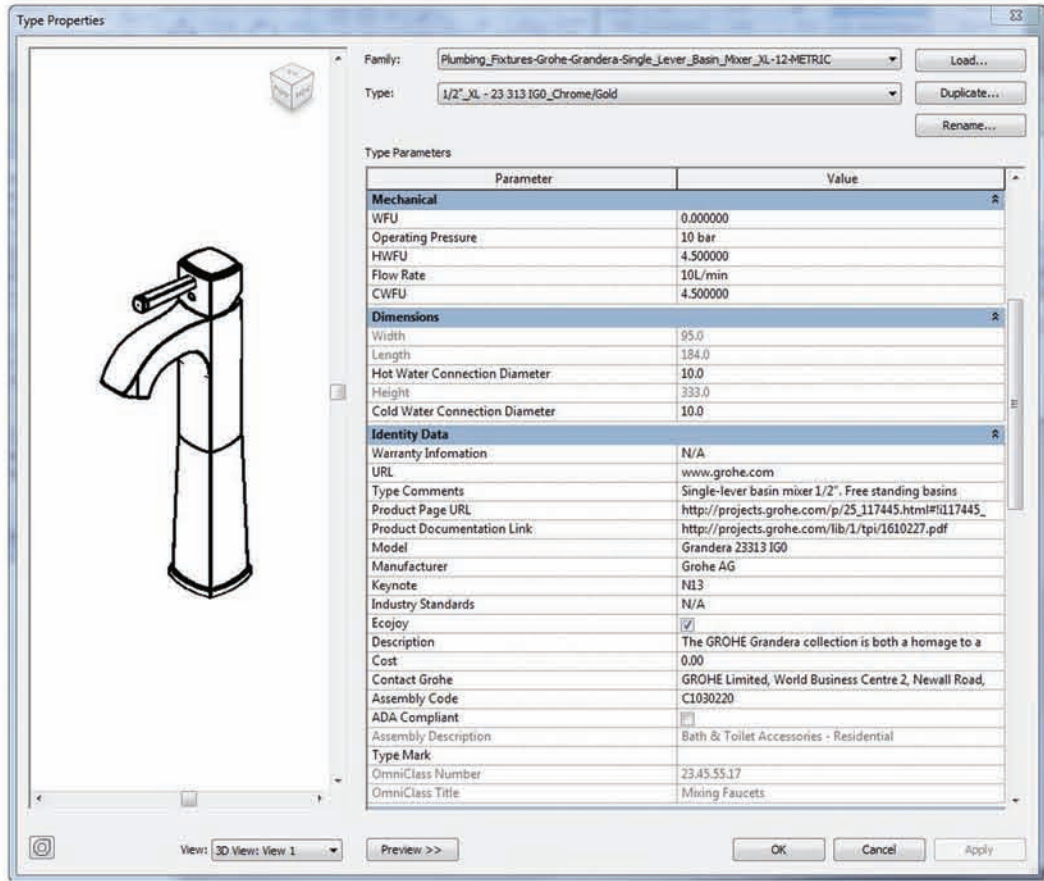

4. The Family is now copied & embedded into your project and can be selected from the 'Project Browser / Families / Plumbing Fixtures' selector within your project BIM (You can delete the item you added to your 'Revit Model' and the Family will remain within your Project Browser.)

# Using the GROHE components

The GROHE components have additional types predefined to assist the user when specifying the various available GROHE products. They also include detailed information relating to the manufacturer and the product (including links to the product page and documentation) as illustrated below.

All of the GROHE components have been created as face based families this allows the user to simply attach the component to any surface. Ensure that you have the desired family selected and simply hover over the surface for the fixture to appear. Once positioned, with the fixture selected the connection points will appear to allow the user to connect the fixture to the MEP system.

The components also include render quality materials to allow the user to produce high quality images as illustrated.

# Other Notes

You can add the GROHE components to your company template file, they will then be available without loading when starting a new project.
