

USE OF SMART SENSORS FOR MORE WATER SECURITY

A leak or a burst pipe quickly leads to immense renovation costs. 93% of the cases are avoidable.

With intelligent water security systems such as GROHE Sense and GROHE Sense Guard, parameters that indicate water damage can be measured. Via the connected GROHE ONDUS app the system sends out an alarm and, in extreme cases, allows users to automatically or manually stop the water supply – anywhere and at any time.

ADVANTAGES OF A WATER SECURITY SYSTEM

Quick and easy installation

Simple handling via app

Automatic stop of water supply

Minimization of risk thanks to smart water sensors

Saving money with preventive protection of real estate

Subtle fit into any living ambience
