Pure Freude an Wasser

GB1

Please pass these instructions on to the end user of the fitting.

1	a	b	c
	1/2"		29 800
	ø 15mm		29 801
	3/4"		29 802
	ø 18mm		29 803
	ø 22mm		29 804

Safety notes

Protection against scalding

It is recommended that near points of discharge with particular sensitivity to the outlet temperature (hospitals, schools, nursing and retirement homes) thermostatic devices should be installed which can limit the water temperature to 43 °C. The product includes an appropriate temperature end stop. It is generally recommended that the temperature of shower-systems should not exceed 38 °C in nurseries and specific areas of care centres. Use Grohtherm Special thermostats with special handle to facilitate thermal disinfection and appropriate safety end stop. Applicable standards (e. g. EN 806-2) and technical regulations for drinking water must be observed.

Application

Thermostat mixers are designed for hot water supplies from pressurised storage heaters and offer the highest temperature accuracy when used in this way. Given sufficient output (min. 18 kW or 250 kcal per min), electric or gas-fired instantaneous heaters are also suitable.

Thermostat mixers cannot be used in conjunction with low-pressure storage heaters (displacement heaters).

All thermostat mixers are adjusted at the factory at a flow pressure of 3 bar on both sides.

The built-in thermostat only shuts off the upper outlet. An additional stop valve must be fitted if the lower outlet is used.

For an order number index to the various installation components for the concealed mixer, see fold out page II fig. [1].

a = Size of union

b = Part

c = Part No.

Technical Data

Minimum flow pressure without downstream resistances	0.5 bar
Minimum flow pressure with downstream resistances	1 bar
Max. operating pressure	10 bar
Recommended flow pressure	1 - 5 bar
Test pressure	16 bar
Flow rate at 3 bar flow pressure	approx. 24 l/min
Max. water temperature at hot water inlet	80 °C
Recommended max. flow temperature (for energy saving)	60 °C
Safety stop	38 °C
Hot water temperature at supply connection min. 2 °C higher than mixed water temperature.	
Hot water connection - W - (-H-)	left
Cold water connection - K - (-C-)	right
Minimum flow rate	5 l/min

At a flow pressure over 5 bar it is recommended that a pressure reducing valve be fitted in the supply line.

New installations

- Prepare wall ready for mixer. Drill holes for thermostat mixer and chase-out grooves for pipelines.

- Observe the installation depth in accordance with the instructions given on the mounting template, see also fold out page II fig. [2].

x = Face of tiles

y = Front face of mounting template

z = Resting point for spirit level

- Align the mixer horizontally, vertically and parallel to the wall, see fig. [3] (place a spirit level on the cams or face of the mounting template).
- Install concealed thermostat mixer module in wall and connect pipelines, see fig. [4].

The housing is provided with pre-drilled holes (B) to facilitate mounting the fitting to the wall, see fig. [3].

- **Do not solder the connections between the pipelines and housing**, otherwise the built-in non-return valves may be damaged.

- Seal the open outlet with screw plug.

Note!

- **The hot water supply must be connected on the left** (marked W (H) on housing) **and the cold water supply on the right** (marked K (C) on housing), **as viewed from the operating position.**

Open cold and hot water supplies.

Test the pipelines and concealed thermostat module connections for leaks.

Flush pipelines thoroughly.

1. Remove screws (C) and mounting template (D), see fig. [5].
2. Close the hot and cold water supplies.
3. Remove screw plug (E).
4. Remove non-return valve (F) and filter (G).
5. Install flushing plugs (H) in non-return valve seat recesses, see fig. [6].
6. Open the hot and cold water supplies and flush pipes thoroughly.
7. Close the hot and cold water supplies and remove flushing plugs (H).
8. Install filter (G) and non-return valve (F), see fig. [5].
9. Install screw plug (E).
10. Reinstall mounting template (D).

Plaster and tile the wall, excluding the area occupied by the mounting template. Seal any apertures in the wall so that they are watertight to spray water.

- Tiles laid in mortar should be pointed so that the joint is tapered towards the outside.

- Seal prefabricated walls with a permanently plastic compound.

Do **not** remove the fitting template before final installation.

Final installation

1. Remove screws (C) and mounting template (D), see fig. [7].
2. Install holder (J) and fit sleeve (K) and (L), see fig. [8].
3. Grease the seals (M1) for the escutcheon mounting bracket (M2) with the special grease supplied and install escutcheon mounting bracket (M2) with screws (N), see fig. [9].
4. Fit the escutcheon (M).

If the thermostat has been installed at too great a depth, this can be adjusted by 27.5mm with an extension set (see fold-out page I, ref. No. 47 200).

Open cold and hot water supplies.

Installation of the flow control knob (S) and adjustment of the economy stop, see fold-out page II, figs. [10] to [12].

- The flow rate is limited by the economy stop (O) supplied, see fig. [10].

To install the flow control knob (S), proceed as follows:

1. Close the ceramic headpart (P) by turning clockwise.
2. Install the economy stop (O) in the desired position.

For possible settings, see fig. [11].

3. Fit splined adapter (Q), see fig. [12].
4. Fit fastening set (R).
5. Install flow control knob (S) so that the button (S1) is at top. If a higher rate is desired, the stop can be overridden by depressing the button (S1).

Reversed connection (hot on right - cold on left). Replace thermostatic compact cartridge (T), see Replacement Parts, fold-out page I, Prod. no. 47 175 (1/2").

Adjustment

Installation of the temperature control handle (U) and temperature adjustment, see fold-out page III, figs. [13] and [14].

- Before the mixer is put into service if the mixed water temperature measured at the point of discharge varies from the specified temperature set on the thermostat.
 - After any maintenance operation on the thermoelement.
1. Open the shut-off valve and check the temperature of the water with a thermometer, see fig. [13].
 2. Turn the adjusting nut (V) clockwise or anticlockwise until the water temperature reaches 38 °C.
 3. Fit fastening set (W), see fig. [14].
 4. Install temperature control handle (U) so that the button (U1) is at top.

Temperature limitation

The safety stop limits the temperature range to 38 °C. If a higher temperature is desired, the 38 °C limit can be overridden by depressing the button (U1), see fig. [14].

Temperature end stop

If the temperature end stop is at 43 °C, insert accompanying temperature limiter (Z) in temperature selection handle (U), see Fig. [14].

Prevention of frost damage

When the domestic water system is drained, thermostat mixers must be drained separately, since non-return valves are installed in the hot and cold water connections.

The complete thermostat assemblies and non-return valves must be unscrewed and removed.

Maintenance

Inspect and clean all parts, replace if necessary and grease with special valve grease.

Shut off cold and hot water supplies.

I. Thermostatic compact cartridge (T), see fold-out page III, fig. [15] to [17].

- Loosen screw ring (X) using a 34mm tool.
- If necessary, lever out thermostatic compact cartridge (T) via recess (T1).
- Remove screw ring (X).

Assemble in reverse order.

Observe the correct installation position of the thermostatic compact cartridge (T), see detail (T2).

Readjustment is necessary after every maintenance operation on the thermostatic compact cartridge (see Adjusting).

II. Non-return valve (F) or (F1), see fold-out page III figs. [15], [16], [18] and [19].

Assemble in reverse order.

III. Ceramic headpart (P), see fold-out page III figs. [15], [16] and [18].

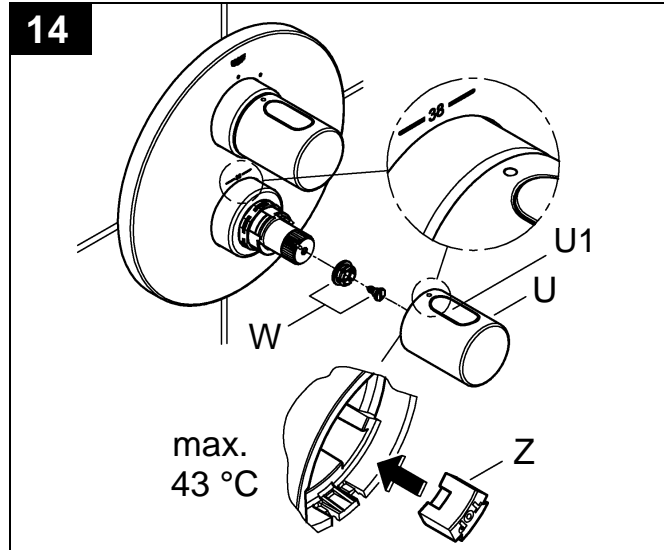

Assemble in reverse order.

Observe the correct mounting positions!

Replacement parts, see fold-out page I (* = special accessories).

Care

For directions on the care of this fitting refer to the accompanying Care Instructions.
