Safety information

Avoiding scalding

It is recommended that thermostatic devices able to limit the water temperature to 43 °C be installed at points of discharge with special attention to the outlet temperature (hospitals, schools, nursing and retirement homes). This

product is equipped with a temperature end stop. It is generally recommended that the temperature of shower systems not exceed 38 °C in nurseries and specific areas in care homes. Use Grohtherm Special thermostats with special handles for facilitating thermal disinfection and with an appropriate safety end stop. Applicable standards (e.g. EN 806-2) and technical regulations for potable water must be observed.

Technical Data

- · Flow pressure
- Minimum flow pressure without downstream resistances

50 kPa

- Minimum flow pressure with downstream resistances

100 kPa

Recommended

150:500 kPa

· Minimum flow rate

5 l/min

• Temperature

- Hot water supply

max. 70 °C

- Recommended for energy saving

60 °C

- Thermal disinfection possible

Safety stop

43 °C

· Hot water temperature at supply connection min. 2 °C higher than mixed water temperature

Flow rates without downstream resistances, see page 1. These should be observed when dimensioning the outlet!

The following special accessories are available:

- Extension 25mm (prod. no.: 14 048)
- Isolating valves (prod. no.: 14 053)

Thermostat compact cartridge for exchanged water channels: Reversed connections, hot on right and cold on left, replace compact cartridge (prod. no.: 49 003)

Installation

This product must be installed in conformance with local codes e.g. AS/NZS 3500 series of standard!

- · In order to flush, remove the plugs (Y), see page 2 Fig. [4].
- · Open cold and hot water supply and check connections for watertightness!
- · Alignment of functional unit by 6° possible.
- Measure valves, see page 5 Fig. [18]. For a dimension larger than 40mm, the enclosed extension must be used.

Adjusting to 38 °C

- Before the mixer is put into service if the mixed water temperature measured at the point of discharge varies from the desired temperature set on the thermostat, see page 5 Fig. [15].
- · Every time following maintenance on the thermostatic compact cartridge.

Temperature limitation

The safety stop limits the temperature range to 38 °C. If a higher temperature is required, the 38 °C stop can be overridden by pressing the button.

Danger of frost damage

When the domestic water system is drained, the thermostats must be drained separately since non-return valves are installed in the hot and cold water connections.
